FOOD SENSORS

(Value added course)
Offered by
Department of Bioelectronics and Biosensors

Feeding the world's growing population requires great quantities of food and accurately measuring the quality of that food is vital to sustained personal and economic health. Food quality testing is necessary to monitor and control quality parameters throughout the fresh produce supply chain to meet consumer demands and extend shelf life. Sensors can be used as analytical tools in some food industries, especially applied to the determination of the composition, degree of contamination of raw materials and processed foods, and for the on-line control of the fermentation process.

Course Benefits

- Understanding the food safety and measures
- Understanding the basic of biosensors.
- Learning the application of sensors in food sectors.

Offered during Holidays/Weekends

For more Information contact: Dr. C. Sekar, Senior Professor and Head Cell: +91 9442563637, Email: sekar2025@gmail.com

Course	FOOD SENSORS
01.1.41	The main objective of the course is to provide the attendants theoretical and
Objectives	practical fundamentals of the operation principles of sensor systems. Particular emphasis will be devoted to chemical, and biosensors used in food technology.
	At the end of each unit the student will be able to
	* understand the food safety and measures describe the role of
Outcomes	nanotechnology in food.
	 understand the basic of biosensors.
6.1.1.1.	tearn the application of sensors in food sectors.
Schedule	Teaching: 6 hours per week Pesia knowledge on food sefety importance of food quality applications of
Prerequisite	Basic knowledge on food safety, importance of food quality, applications of nanotechnology in food industry and biosensors are prerequisite.
Unit I	FOOD SAFETY
	The importance of food safety, how food borne illness affects consumers and
	retailers, how poor safety practices affect food products, Food hazards, Basic rules
	regarding personal hygiene, good manufacturing and hygiene practices at various
TT *4 TT	sectors of food processing.
Unit II	FOOD QUALITY Basic concepts. Nutritional and sensory attributes and their assessments, causes of
	undesirable changes leading to quality deterioration in foods and their
	implications. Determination of probable cause(s) of observed quality change in
	foods.
Unit III	BASICS OF NANOTECHNOLOGY AND NANOSTRUCTURES IN
	FOOD
	Evolution of new technologies in the food sector, public perception of
	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized
	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized food ingredients and additives, naturally occurring food nano substances and
	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized food ingredients and additives, naturally occurring food nano substances and nanostructure.
Unit IV	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized food ingredients and additives, naturally occurring food nano substances and nanostructure. INTRODUCTION TO BIOSENSORS
Unit IV	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized food ingredients and additives, naturally occurring food nano substances and nanostructure. INTRODUCTION TO BIOSENSORS Biosensor Design and Fabrication- fundamentals, Biosensor components
Unit IV	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized food ingredients and additives, naturally occurring food nano substances and nanostructure. INTRODUCTION TO BIOSENSORS Biosensor Design and Fabrication- fundamentals, Biosensor components (electrical, optical based), transducers basic principles, sensors characteristics,
Unit IV	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized food ingredients and additives, naturally occurring food nano substances and nanostructure. INTRODUCTION TO BIOSENSORS Biosensor Design and Fabrication- fundamentals, Biosensor components (electrical, optical based), transducers basic principles, sensors characteristics, analytical evaluation of sensor measurements, accuracy, linearity, detection limit,
	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized food ingredients and additives, naturally occurring food nano substances and nanostructure. INTRODUCTION TO BIOSENSORS Biosensor Design and Fabrication- fundamentals, Biosensor components (electrical, optical based), transducers basic principles, sensors characteristics, analytical evaluation of sensor measurements, accuracy, linearity, detection limit, selectivity and specificity. Scope of biosensors and its limitations.
Unit IV Unit V	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized food ingredients and additives, naturally occurring food nano substances and nanostructure. INTRODUCTION TO BIOSENSORS Biosensor Design and Fabrication- fundamentals, Biosensor components (electrical, optical based), transducers basic principles, sensors characteristics, analytical evaluation of sensor measurements, accuracy, linearity, detection limit, selectivity and specificity. Scope of biosensors and its limitations. ADVANCED SENSOR APPLICATIONS FOR FOOD PROCESSING
	Evolution of new technologies in the food sector, public perception of nanotechnology food products, Nanomaterials for food applications-Nano-sized food ingredients and additives, naturally occurring food nano substances and nanostructure. INTRODUCTION TO BIOSENSORS Biosensor Design and Fabrication- fundamentals, Biosensor components (electrical, optical based), transducers basic principles, sensors characteristics, analytical evaluation of sensor measurements, accuracy, linearity, detection limit, selectivity and specificity. Scope of biosensors and its limitations. ADVANCED SENSOR APPLICATIONS FOR FOOD PROCESSING Gas sensors – Electronic noses, tongues and testers – Chemosensors, biosensors,
